Hi All,

I have just done some formatting over it. So do check it when u gets the time..... I will be available from 10:30 AM to 3:00 PM Wednesday at the university and you can call me at 0403 370 225. We will have this done tomorrow as just few things are remaining which will be done after modification tomorrow.

Hi All,

I have submitted our SEP project simple bussiness case this morning the same copy that I emailed on ours Students Email Account.

And Riemke are you coming to the lecture/tutorial next week beacuse Ranjita was asking about you i.e. where is our fourth group member? Has she withdrwan from this unit? etc. So reply to this email over this.

Have a nice weekend.

Hey Team,

Here's my formatted version of the status report, looks great with the new header.  
Change or add anything you like. I have somewhere I need to be tonight, so this will be the last you will hear from me.  
Could one of you please upload the report to the class forum at some point tonight.

Thanks,

- Pete

Hi Riemke!

Hope u have a nice weekend. I was looking to make a project plan and if u have created some graphic work

like pages, rich pictures etc please send those to me so that I can make a project plan according to those screens.

Thanks  
Cheers,  
Irfan

Hi Riemke,

Below links can be very help full in designing Petrol Station Locator screen shots.

1-> <http://itunes.apple.com/au/app/australia-petrol-service-stations/id462179545?mt=8>

You can have a look at screen shots section in the above link. But remember the link contains screen shots of an APP but in our case it would a web page that will be fitted into an Iphone or any other device. So idea i just to give you the picture of what features will be involved in it.

So just prepares rough ones and we after group discussion will add/remove from these.

2-> For the webpasge below links might be help full in designing.

<http://apps.nowwhere.com.au/caltex/locator/>  
<http://target.dynamiccatalogue.com.au/portal/storelocator>  
<http://help.abcsshop.com.au/questions.php?questionid=13>  
<http://www.rejectshop.com.au/stores/index.php>

[http://www.bigw.com.au/bigw/storelocator/store\\_finder](http://www.bigw.com.au/bigw/storelocator/store_finder)  
<http://www.kmart.com.au/LocationsHours.aspx>  
<http://www.davidjones.com.au/stores/>

Hop so this information will help.

Cheers,  
Irfan (Mob No: 0403 370 225)

Hi everyone!

Myself and Liam had a discussion over the website options to the user and we created two story board options of what could fit into the design. So attached is the document containing those options.

So Riemke, do have a look at those options and analyze which one would be good and simple for user from the accessibility point of view. Also, you can think of other possible options that you feel can be better doing it.

Have a good time.  
Bye

Cheers,  
Irfan

Hi Everyone!

I have created an initial project plan just a rough one and may change and its attahced. Basicllay we will complete development in three iterations each of 10 days (but may changes like 7 days for first iteration, 10 for second and 7 for 3rd iterations ) so that we can finish the things before a good time. And iterations are basically are the rounds of development focusing on listed items only. and then all items are integrated in the end ..

So do have a look and I would like to have this share in the lecture.

Note the pdf in the attachment is the template help and not related to our project

Bye

See you in the lecture.

Cheers,  
Irfan

So tonight I had a play around with the Google Maps API and used Liam's code to map all of Caltex's locations in Australia. Take a look <http://i.imgur.com/VBMez.png>. It's a lot of points and took my computer a good 10 minutes to load them all so we will need to limit how many points are displayed at any one time.

Also Liam, I found that your CSV parser doesn't work in Chrome, only Firefox (didn't try IE). So we should either fix that or change the supported browsers scope in the docs.

Hi Riemke,

Its basically a consideration from a user point of view that which scenario is easy for the end user to follow. Both scenarios can do a job but needs to pick a one easy for the user to get his search done. you can design both views and do a mock run on it like which does the job easy.

Cheers,  
Irfan

Hi everyone,

Kindly see the design that riemke has prepared and raise questions if any.

Riemke: Looks alright but I am thinking of minor adjustments like dont think so there is any need to states tabs. Also not sure with the information just left to the map is required or not. However, Liam and peter must look at it aswell.

And Riemke, it would be good to have services icons beacuse they give a bit ease to the user. And also we may need seperate image for banner and tabs background, slices and html as well.

Peter & Liam! kindly have a look

Thanks,

Cheers,  
Irfan

That's fine I only had the states tabs because you had it in the example. I think you'd need the side bar information so people know the address and services etc

Design looks great.

If we do have extra icons for services, maybe just for some key ones like 24h, Disabled access, BBQ Gas but not for each fuel type.

Also we can use any image as a marker on the map [like in this example](#) so it might be nice to make some Shell, BP and Caltex themed markers.

On a side note Liam, I'm still having trouble with Git. I try to sync my committed changes and I get a "do not have permissions error" and when I try to create and sync to a new branch I get "an error occurred". I'm not sure if I'm doing something wrong on my side or if there's some settings you need to change on yours.

We don't need images for buttons or tabs. Easy enough to do in CSS allowing much easier scaling or colour changes later on.

Liam & Riemke:

Not sure can we apply the gradient or glossy background using css. Liam if you look at the buttons and tabs these have some gradient or glossy appearance applied to it that with CSS is not possible. And how we will make tabs shapes in css as it is not only a rounded box.

To: Muhammad Irfan Arif <iarif20@gmail.com>

Cc: Riemke Aggio-Bruce <riemke.aggio-bruce@hotmail.com>, Peter Monus <pete.monus@gmail.com>

Both gradients and the shape of the tabs are very easy to do. Look up border-radius and CSS linear gradient for examples.

To: Liam David <liam.davis@trezoid.com>

Cc: Riemke Aggio-Bruce <riemke.aggio-bruce@hotmail.com>, Peter Monus <pete.monus@gmail.com>

I think it's better to use the images as it will work on all browsers with no compatibility issues and the design has not only gradient images it's has a glossy kind of a look and these are not even linear. And do we have our design Change Some stage I don't think so so make it simple by using fixed images that would b easy to do it.

all modern browsers support CSS gradients, and with a little extra syntax every browser back to IE6 supports them. Browser support for those properties is a non-issue.

Hi Liam & Riemke,

I know the use of things like webkit just like the below, But my question is do we need to do this because our design will not be changed once developed and if we changes the colors that would mean we are doing it against our design which is not a good idea.

```
background: -webkit-gradient(linear, left top, left bottom, from(#ccc), to(#000));
webkit-radius
```

Thanks Riemke,

I will put these images into an HTML tonight and will let you know if I require anything.

Cheers,  
Irfan.

Hi Riemke,

I need tabs images (Both Active and InActive i.e Gray and Gradient effect).

Thanks.
